About Myself

I'm a software developer with around 12 years of commercial experience. I live in the Blue Mountains west of Sydney, so I'm mainly interested in remote opportunities.

My expertise is in functional programming, service-oriented cloud architectures, scalable data pipelines and data-engineering, and web development.

I spent most of 2020 working on my own startup in the digital identity space, which was an amazing experience, but made much harder by trying to do it during a global pandemic.

I'm passionate about the environment, privacy, civil liberties, and education. I'd ideally like to work for a company that's having a positive impact on the world.

For my next role I'm looking for something where I can step up and take on more responsibility. In particular, a role where I can work across both software development and product management would be ideal.

At university I focused on large scale parallel and distributed systems; various machine learning, data mining and AI techniques; and a healthy dose of pure theory and mathematics.

Skills

Programming	Haskell, Scala, JavaScript, Python, SQL
Document / Data Formats	HTML & CSS, XML, Avro, JSON, Delta
Databases	MySQL, PostgreSQL, Kafka, ElasticSearch, DynamoDB
Libraries & Frameworks	React, Spark, Node
Cloud Platforms	AWS, GCP, DataBricks
Operating Systems	Windows, Ubuntu Linux, MacOS
Tools & Software	VSCode, JetBrains IDEs, Git, Terraform, Docker, Nix
Soft Skills	Agile, Product Management, Mentoring, Kanban, Scrum

Experience

Seek

Sydney, Australia

SENIOR SOFTWARE ENGINEER

August 2022 - Present

At Seek I work on the 'Candidate Quality' team, where I productionise AI and LLM models that help hirers find candidates that are a strong fit for their roles, and help candidates find jobs that are a good fit for them.

This work is a combination of building and maintaining low-latency data pipelines; building out scalable and cost-efficient APIs to serve models and enable product features; organising and storing data for analytics, training, and live inference; and collaborating with product managers and data scientists to bring new models and features to production.

My recent work has included reducing my team's AWS costs by 40%, and shifting a large section of our processing pipelines off of AWS Lambda onto Spark, Kafka, and DataBricks.

I have also been gradually modernising parts of my team's tech stack, including migrating from Serverless to Terraform for infrastructure management, and introducing Nix to our development environment to enable reproducible development environment.

I'm currently working on a new "High-Fit" project, using AI to highlight and explain why particular candidates are a good fit for a role, in a human-understandable way.

KEY SKILLS

PYTHON, SCALA, JAVASCRIPT, AWS, SPARK, KAFKA, DATABRICKS, LLMs, AI, MLOPS, TERRAFORM, DATA ENGINEERING, NIX

Voly

STAFF SOFTWARE ENGINEER

Sydney, Australia

October 2021 - June 2022

At Voly I worked as a senior - and later staff - software engineer on the backend team. My role encompassed the full stack from the web front-end, to the backend, server administration, cloud infrastructure, databases and security.

I was responsible for maintaining and building upon the initial go-to-market MVP software that the company had procured - written in TypeScript using NestJS and GraphQL, and using Shopify as a backend for most of the ecommerce aspects.

I was also responsible for facilitating a company wide consultation and requirements gathering process to define the scope of a replacement backend system that was fit for purpose for the company's mid and long term growth and product goals.

My team had begun work implementing this new backend, using Haskell, Postgres and Hasura (a Postgres-to-GraphQL API layer), as well as Terraform for managing infrastructure on Google Cloud. Unfortunately, due to the global downturn, my role was impacted by a round of layoffs so we were not able to complete this work.

On the softer-skill side, I also had a lot of fun mentoring some junior and mid-level frontend developers, and bringing my team up to speed working in an agile Kanban system.

KEY SKILLS

TYPESCRIPT, HASKELL, GRAPHQL, POSTGRES, HASURA, NESTJS, TERRAFORM, GOOGLE CLOUD, SHOPIFY

Prezzee

SENIOR SOFTWARE ENGINEER

Sydney, Australia

March 2021 - September 2021

At Prezzee, I was responsible for integrating the company's chosen CMS (Kentico Kontent) into their website and their app's web front-end, in order to enable non-technical employees to manage content.

I was also responsible for creating a large chunk of their web UI component library, and integrating that into the website and app as part of a site redesign that was happening at the same time as the CMS was being rolled out.

As a part of that work, I helped onboard and upskill several junior and mid-level engineers onto the project, and was in practice running the dev team a lot the time as the lead / head-of-frontend was often busy with other work.

I also introduced several new agile practices that resulted in my team being one of the most consistent and accurately performing (in terms of estimates vs reality) teams in the company.

KEY SKILLS

RESCRIPT, REACT, NEXT.JS, HTML & CSS, KENTICO KONTENT, TERRAFORM, AGILE, FUNCTIONAL PROGRAMMING

1Self

CO-FOUNDER

Sydney, Australia

February 2020 - February 2021

As a co-founder I worked across all functions of the business, with a particular focus on software development, product management, and legal and compliance issues. On the back-burner for the foreseeable future, as I became a parent instead.

KEY SKILLS

JAVASCRIPT, REACT, AWS, TERRAFORM, PRODUCT MANAGEMENT, AGILE, STARTUPS

Netscout (formerly Arbor Networks)

SOFTWARE ENGINEER

Sydney, Australia

January 2017 - January 2020

At Netscout I worked as part of an agile team to deliver scalable data processing pipelines that power a suite of analytics tools and services which are used by both their customers, and their sales and support teams.

My team and I were responsible for almost all aspects of these pipelines, including development, deployment, monitoring, end-to-end-testing, and working with our product and delivery management team to clarify goals and scope work.

I primarily worked in Haskell for development, with some forays into Scala (legacy pipelines), Ruby & Terraform (deployment & infrastructure tooling), Python (ML code, scripting), and even occasional bits of C and JavaScript.

I learned an incredible amount, especially about what it takes to develop and deploy stable, scalable, and maintainable solutions. I also greatly enjoyed some of my secondary duties, which included leading internal workshops on Haskell and functional programming, as well as mentoring interns in some fundamental computer-science concepts.

KEY SKILLS

HASKELL, SCALA, PYTHON, TERRAFORM, AWS, AGILE, DATA ENGINEERING, FUNCTIONAL PROGRAMMING

General Dynamics Mediaware

SOFTWARE ENGINEER

Canberra, Australia

October 2015 - December 2016

At Mediaware I worked in an agile team to deliver mission critical video processing software to our broadcast customers around the globe.

My main responsibility was leading the development and design of the web-based user interfaces to our core products

KEY SKILLS

PYTHON, JAVASCRIPT, HTML & CSS, C, AGILE, WEB DEVELOPMENT

Welcomer

SOFTWARE ENGINEER

Canberra, Australia

October 2014 - July 2015

Australian National University

TUTOR (PART TIME)

Canberra, Australia

February 2012 - June 2015

Oxide Interactive

JUNIOR WEB DEVELOPER

Canberra, Australia

January 2010 - September 2010

Zoo Advertising

WEB DEVELOPER (CONTRACTOR)

Canberra, Australia

March 2009 - September 2009

The Stavridis Group

JUNIOR WEB DEVELOPER

Canberra, Australia

November 2008 - February 2009

Education

Australian National University

BACHELOR OF COMPUTER SCIENCE (HONOURS) - FIRST CLASS HONOURS

Canberra, Australia

2009 - 2014

The Bachelor of Computer Science (Honours) is a four year undergraduate degree. The degree is a research-focused professional program for exceptional students who have an interest in undertaking research in an industry or academic environment. It is expected that students will graduate with First Class Honours.

Bachelor of Computer Science (Honours) students are expected to maintain a superior distinction average in order to remain in the degree.

General Assembly

PRODUCT MANAGEMENT - 1 WEEK INTENSIVE

Sydney, Australia

2019

A one week intensive course on product management, covering topics such as the product lifecycle, hypothesis validation, customer interviews, personas, feature prioritisation, competitor research, minimum viable products, product roadmaps, metrics, sketching, wireframes, usability testing, and agile.
